

DECT | DEC Token | Decentralized Ecosystem Community Token

1. Introduction

DEC Token (DECT) is the official cryptocurrency of the Decentralized Ecosystem Community (DEC). It is built on the Ethereum blockchain, adheres to ERC-20 standards, utilizes OpenZeppelin libraries, and enables secure value storage, investment, exchange, and transfer within DEC.

2. The Founders

DEC was founded in 2024 by a team of 32 professionals with expertise in DeFi who previously collaborated and now share a unified vision for the future of the field.

Our primary goal is to build a decentralized ecosystem community rooted in real value by developing products and services focused on production and innovation.

To ensure DECT's self-sufficiency and facilitate the organic transfer of governance from the founders to the community, we have assumed full responsibility for its development during the first four years.

3. Problem & Solution

Bitcoin and Ethereum have revolutionized decentralized finance, and we rely on Ethereum's robust technological infrastructure with confidence.

However, concerns about exploitative minorities controlling the majority of the value inspired us to create DECT—a cryptocurrency built on Ethereum but free from these risks, rather than adopting existing alternatives for DEC's official cryptocurrency.

4. Core Principles

DECT is founded on four guiding principles that shape every decision and action:

- **(D)ecentralization:** Our ethos, representing fairness, transparency, and true independence.
- **(E)cosystem:** Our heartbeat, driving sustainable growth and real, lasting value creation.
- **(C)ommunity:** Our brain, fostering innovation, governance, collaboration, and collective progress.
- **(T)oken:** Our wealth, embodying shared value and empowering a future of limitless possibilities.

5. Tokenomics

The anti-inflationary DECT token has a fixed total supply of 1,000,000,000 tokens, with no possibility of minting additional tokens.

- 12% – Acquired by the 32 DEC founders
- 40% – Allocated to the Uniswap V3 Liquidity Pool
- 48% – Locked in the Treasury with a 4-Year Plan

6. Token Contract

The DECT Token smart contract is secure, efficient, and fully decentralized.

- **Functions:** allowance, approve, balanceOf, decimals, name, symbol, totalSupply, transfer, transferFrom
- **Events:** approval, transfer

This immutable contract incorporates only essential ERC-20 features, prioritizing investor security. It has been verified on Etherscan and is open to comprehensive security and efficiency audits:

<https://etherscan.io/token/0xdb99b0477574ac0b2d9c8ccc56b42277da3fdb82#code>

7. Treasury Contract

The DEC Treasury smart contract securely manages DECT token reserves with controlled withdrawal capabilities accessible only to the DEC founders. To maintain price stability and ensure transparency, withdrawals are limited to a maximum of 10,000,000 DECT tokens every 30 days, accessible only through the designated wallet address.

- Initial lock: 480,000,000 DECT
- First unlock: 10,000,000 DECT
- First unlock date: January 24, 2025
- Last unlock date: December 24, 2028

The contract also facilitates the recovery of ETH and other ERC-20 tokens. It has been verified on Etherscan and is open to comprehensive security audits:

9. Roadmap & In-depth Information

From this point forward, actions will speak louder than words—we've already begun developing the DEC Portal App to unite the community and launch the ecosystem. Stay connected, become part of the community, and contribute to shaping the roadmap ahead:
